D1972100

MINI LIGHT ENGINE - 2

The Davis Series D1972100 is a dual channel light engine and is similar to the D1970100. The unit operates on 6 volts DC. The unit uses BNC connectors which have been drilled out for the connection to the fiber bundles. The unit generate heat when run for one hour and care should be taken as to the placement or location of the unit. The unit is also available in an all solid state version including the lamps which are high power LEDs.
