D1970100

MINI LIGHT ENGINE - 1

The Davis Series D1970100 is a dual channel light engine. The unit operates on 6 volts DC. The unit uses BNC connectors which have been drilled out for the connection to the fiber bundles. The unit is fan cooled and will run for over one hour with very little heat build up. The unit must be installed in such a manner for the air discharge and intake to be free from obstructions.
